Working File:
https://docs.google.com/spreadsheets/d/1FsMcoEoPLZ2l6gl8do22NjlgNKYBbwFa/edit?usp=drive_link&ouid=101121887281899581959&rtpof=true&sd=true

PROBLEM STATEMENT:

You are working at Myntra, a leading online fashion retailer. The management has asked you to analyse a dataset of various apparel items to gain insights into pricing, discounts, ratings, and available sizes.

OBJECTIVE:

Analyse product pricing, discount patterns, and rating distributions to uncover key insights from ecommerce fashion data.

TOOLS USED:

Excel

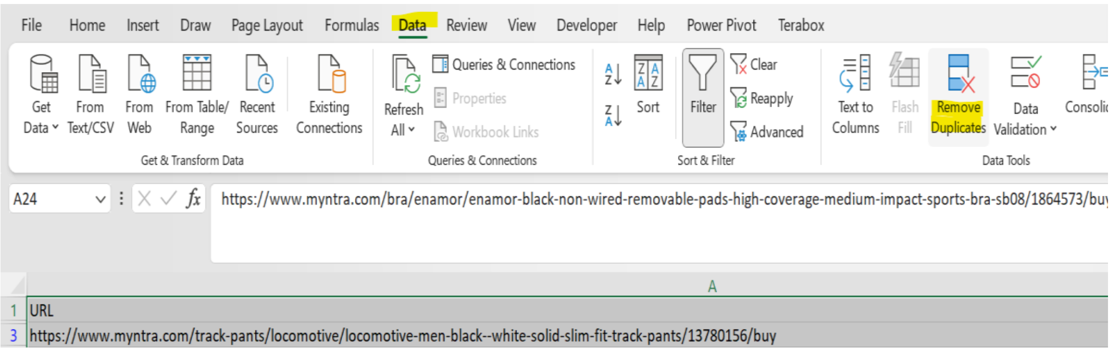
Version 1.0 | October 2025

A. Data Cleaning and Preparation

1. Check for duplicate values in your dataset and remove them.

Solution:

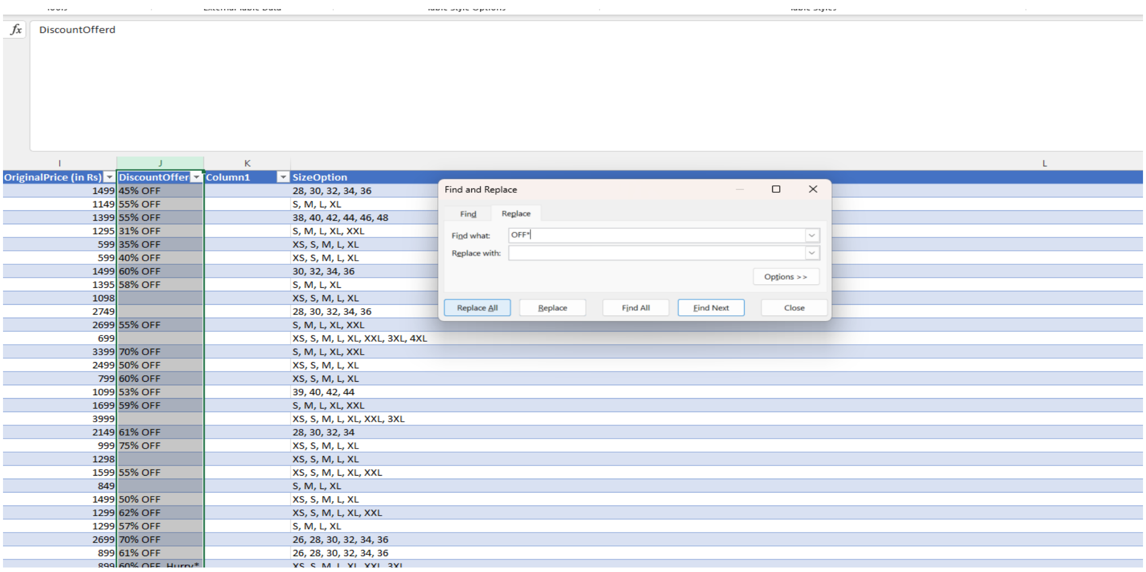
1) Select the Data Range
2) Go to the Data tab on the Ribbon.
3) Click Remove Duplicates in the "Data Tools" group.
4) Configure Columns for Duplicate Check
5) Click OK



2. Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.

Solution:

1) Clear unwanted elements from cells



2) SEARCH("RS.", [@Discount])

- Checks if the text "RS." (case-insensitive) appears anywhere in the **[@Discount]** cell.
- Returns the position of "RS." if found, or an error if not found.

2. ISNUMBER(SEARCH(...))

- Converts the result to TRUE if "RS." is found, FALSE if not.
- **TRUE** means the discount is written as a currency (like "Rs.250").
- **FALSE** means the discount is likely a percentage or decimal (like 0.10).

3. IF(ISNUMBER(...), [@Discount], [@[OriginalPrice (in Rs)]]*[@Discount])

- If **[@Discount]** already contains "RS." (TRUE), use that cell as-is.
- If **[@Discount]** does NOT contain "RS." (FALSE), multiply the original price (**[@[OriginalPrice (in Rs)]]**) by the discount (assumed to be a number/decimal) to calculate the discount value in rupees.

4. SUBSTITUTE(..., "Rs.", "")

- Takes the result of the IF logic above and removes all instances of "Rs." from it (outputs a plain number, no currency text).
- Example: "Rs.250" → "250"
- If input is a number (like 1500*0.10 = 150), it is returned as-is (since there's no "Rs." text to remove).

Summary

Step	**What it Checks or Does**
1	Looks for "RS." in Discount
2	If found: output the Discount cell
3	If not: calculate OriginalPrice × Discount
4	Remove "Rs." text from the final result

K2 =SUBSTITUTE(IF(ISNUMBER(SEARCH("RS.",[@Discount])),[@Discount],[@[OriginalPrice (in Rs)]]*[@Discount]),"Rs.","")

	DiscountedPrice (in R	OriginalPrice (in Rs)	Discount	Standard Discount (In Rs.)	SizeOption
2	824	1499	45%	674.55	28, 30, 32, 34, 36
3	517	1149	55%	631.95	S, M, L, XL
4	629	1399	55%	769.45	38, 40, 42, 44, 46, 48
5	893	1295	31%	401.45	S, M, L, XL, XXL
6		599	35%	209.65	XS, S, M, L, XL
7		599	40%	239.6	XS, S, M, L, XL
8	599	1499	60%	899.4	30, 32, 34, 36
9		1395	58%	809.1	S, M, L, XL
10		1098		0	XS, S, M, L, XL
11		2749		0	28, 30, 32, 34, 36
12	1214	2699	55%	1484.45	S, M, L, XL, XXL
13		699		0	XS, S, M, L, XL, XXL, 3XL, 4XL
14	1019	3399	70%	2379.3	S, M, L, XL, XXL
15		2499	50%	1249.5	XS, S, M, L, XL
16		799	60%	479.4	XS, S, M, L, XL
17	516	1099	53%	582.47	39, 40, 42, 44
18	696	1699	59%	1002.41	S, M, L, XL, XXL
19		3999		0	XS, S, M, L, XL, XXL, 3XL
20		2149	61%	1310.89	28, 30, 32, 34
21		999	75%	749.25	XS, S, M, L, XL
22		1298		0	XS, S, M, L, XL
23	719	1599	55%	879.45	XS, S, M, L, XL, XXL
24		849		0	S, M, L, XL
25		1499	50%	749.5	XS, S, M, L, XL
26		1299	62%	805.38	XS, S, M, L, XL, XXL

Formula :
=SUBSTITUTE(IF(ISNUMBER(SEARCH("RS.",[@Discount])),[@Discount],[@[OriginalPrice (in Rs)]]*[@Discount]),"Rs.","")

3. Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price of the respective category.

Solution:

1. AND([@[DiscountedPrice (in Rs)]]="", [@[Discount Offer]]="")

- Checks if both the 'DiscountedPrice (in Rs)' and 'Discount Offer' columns are blank (empty) in this row.
- Result: TRUE if both cells are blank, FALSE if at least one is not blank.

2. IF(..., AVERAGEIF(D:D,[@Category],H:H), [@[DiscountedPrice (in Rs)]])

- If both are blank (TRUE):
  - Calculates the average of all values in column H, where column D matches this row's 'Category'.
  - Useful for filling missing values with the average discount price for that category.
- If not blank (FALSE):
  - Just returns the value in 'DiscountedPrice (in Rs)' for this row.

3. IFERROR(..., 0)

- If the formula so far gives an error (for example, if there are no matching categories), the result will be 0 instead.
- This keeps your sheet tidy and avoids error messages.

Example Table to Visualize Logic

Category	**DiscountedPrice (in Rs)**	**Discount Offer**	**Output**
Shoes	800		800 (returns DiscountedPrice directly)
Shirt			[Average of H:H where D:D = "Shirt"]
Bag	600	10%	600 (returns DiscountedPrice directly)

Summary Table

Step	**What It Does**
1	Checks if both DiscountedPrice and Discount Offer are blank
2	If TRUE: uses AVERAGEIF to get avg for category; else uses DiscountedPrice
3	If any error occurs, output is 0

I2 =IFERROR(IF(AND([@[DiscountedPrice (in Rs)]]="",[@[Discount Offer]]=""),AVERAGEIF(D:D,[@Category],H:H),[@[DiscountedPrice (in Rs)]]),0)

	H	I	J	K	L

25		0	1499	50%	749.5	XS, S, M, L, XL

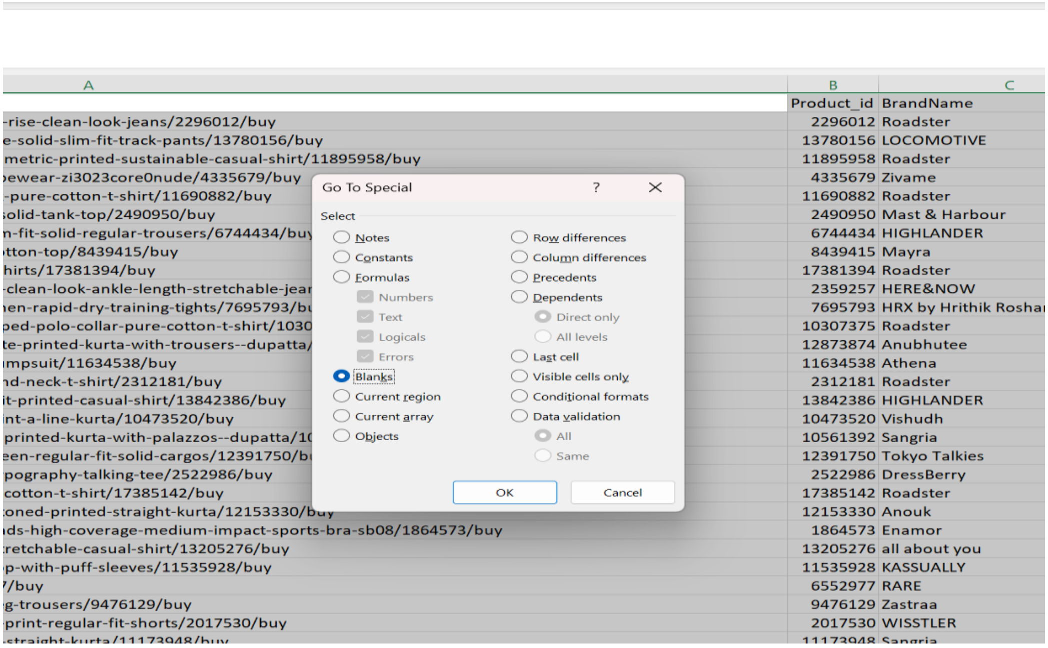
Formula :
=IFERROR(IF(AND([@[DiscountedPrice (in Rs)]]="",[@[Discount Offer]]=""),AVERAGEIF(D:D,[@Category],H:H),[@[DiscountedPrice (in Rs)]]),0)

4. Replace all null values in the "SizeOption" column with the text "Not Available."

Solution

1) Select the Data Range
2) Go to the Home tab on the Ribbon.
3) Click ”Find & Select”� Go To Special�Blanks
4) Than the blanks column selected write “Not Available”

5) Type “Ctrl + Enter”



B. Data Analysis

1.Calculate the overall average original price for products with ratings greater than 4.

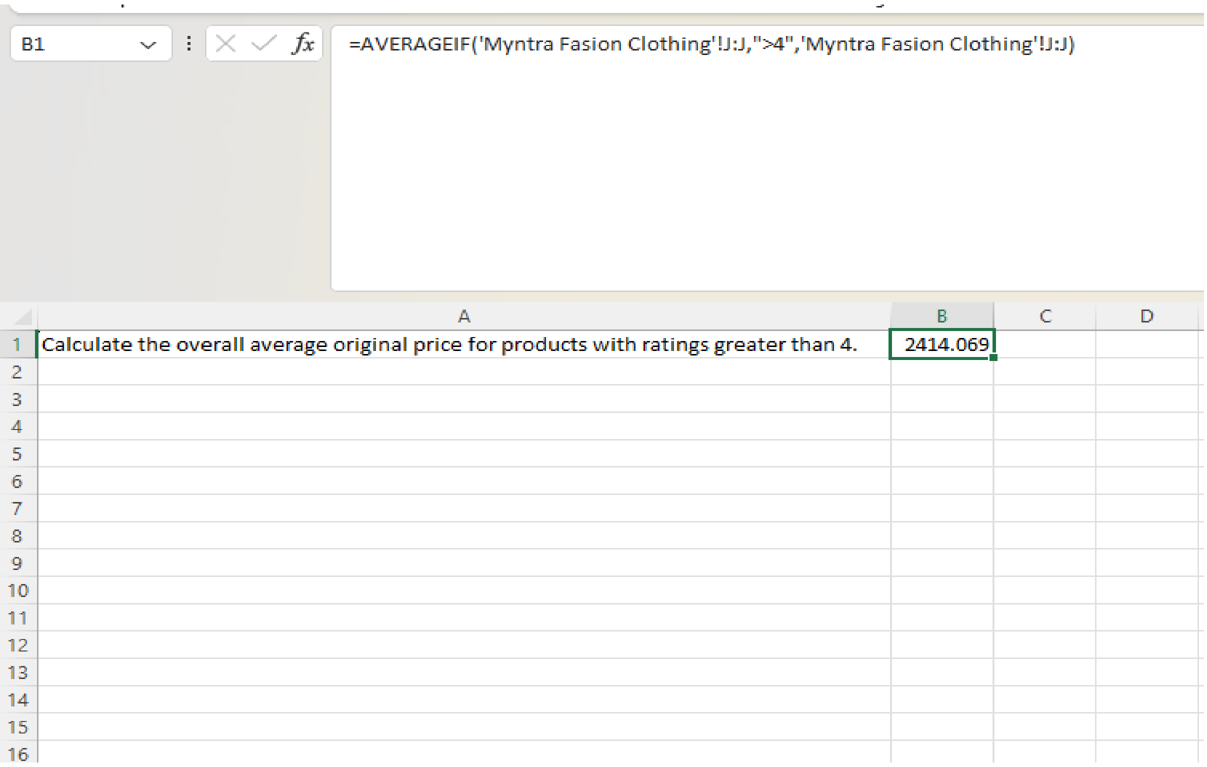
Solution
'Myntra Fasion Clothing'!J:J is the "Range" argument.

It specifies which cells Excel checks for the condition (>4).

Excel only includes rows where the rating in column J is more than 4.

'Myntra Fasion Clothing'!J:J is the "Average Range" argument.

If you wanted to average "Original Price" for ratings >4, put the price column instead (e.g., 'Myntra Fasion Clothing'!K:K).



Formula:
=AVERAGEIF('Myntra Fasion Clothing'!J:J,">4",'Myntra Fasion Clothing'!J:J)

2.Count the number of products with a discount offer greater than 50% OFF.

Solution
Calculate Ratio:

Divide the Standard Discount (in Rs.) by the Original Price (in Rs) for the row:

Ratio = Standard Discount/Original Price

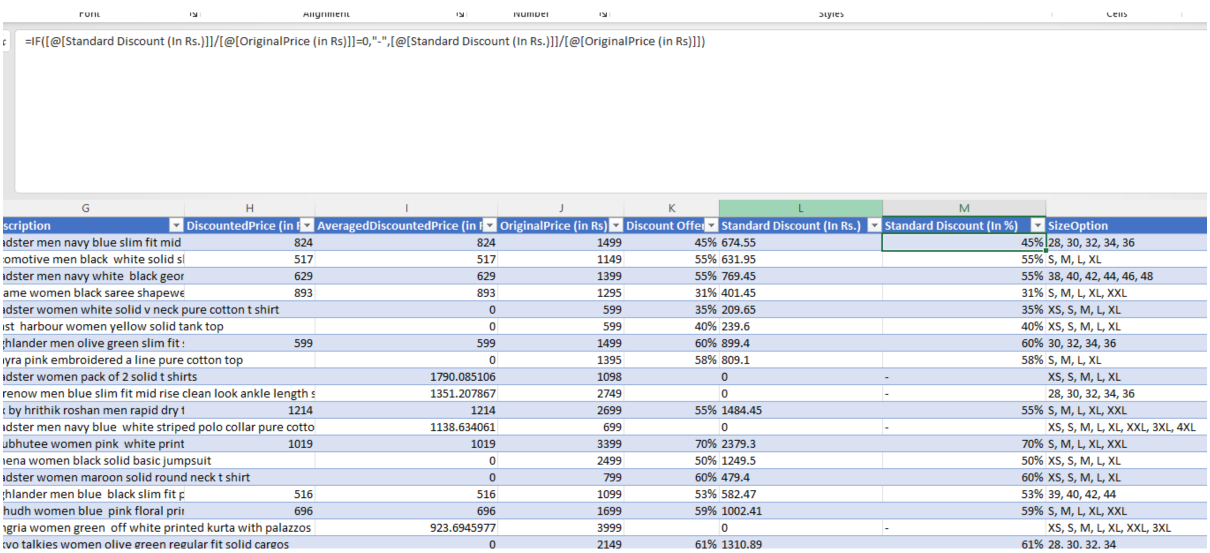
Compare to Zero:

1. Check if the ratio equals 0 using:

   IF Logic:

   - If ratio = 0, return "-" (dash) to show "no discount" visually.
   - Else, return the ratio value itself.

Standard Discount (In Rs.)	Original Price (in Rs)	Result
0	1500	"-"
100	2000	0.05
300	1500	0.20



=IF([@[Standard Discount (In Rs.)]]/[@[OriginalPrice (in Rs)]]=0,"-",[@[Standard Discount (In Rs.)]]/[@[OriginalPrice (in Rs)]])

scription	DiscountedPrice (in R	AveragedDiscountedPrice (in R	OriginalPrice (in Rs)	Discount Offer	Standard Discount (In Rs.)	Standard Discount (In %)	SizeOption

Formula:
=IF([@[Standard Discount (In Rs.)]]/[@[OriginalPrice (in Rs)]]=0,"-",[@[Standard Discount (In Rs.)]]/[@[OriginalPrice (in Rs)]])
=COUNTIF('Myntra Fasion Clothing'!M:M,">50%")

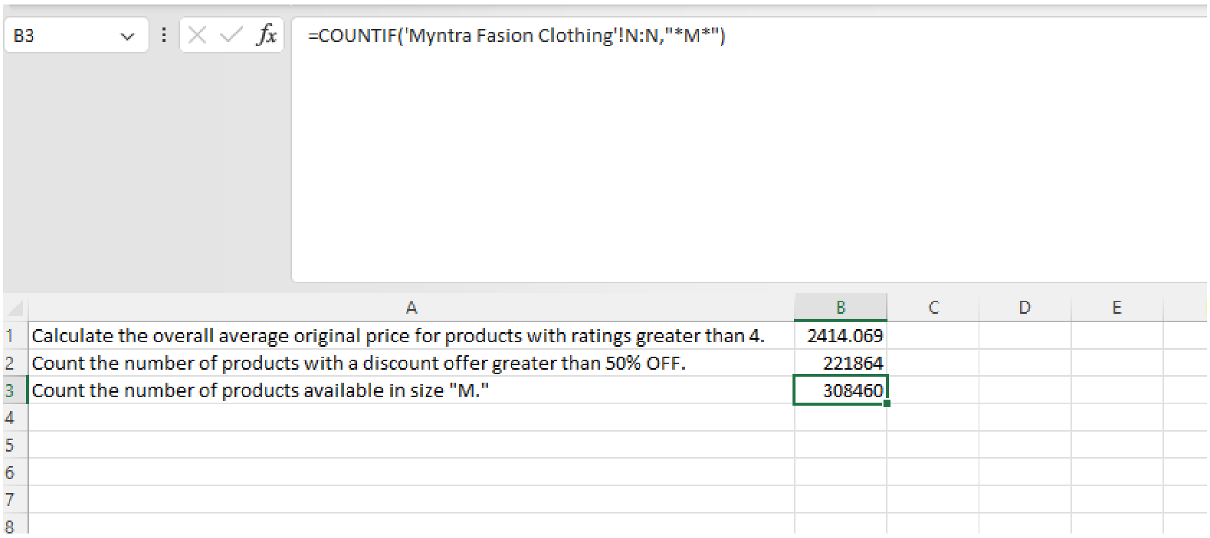
3.Count the number of products available in size "M."

Solution:

Using CountIF Function

Range - SizeOption

Criteria - “*M*”



B3 =COUNTIF('Myntra Fasion Clothing'!N:N,"*M*")

	A	B	C	D	E
1	Calculate the overall average original price for products with ratings greater than 4.	2414.069			
2	Count the number of products with a discount offer greater than 50% OFF.	221864			
3	Count the number of products available in size "M."	308460			
4					
5					
6					
7					
8					

Formula

=COUNTIF('Myntra Fasion Clothing'!N:N,"*M*")

4.Create a new column to label the products as "High Discount" if the discount offer is greater than 50% OFF, otherwise label them as "Low Discount."

Solution

Check for Dash:

Checks if the discount cell contains a dash (likely indicating no discount or blank).

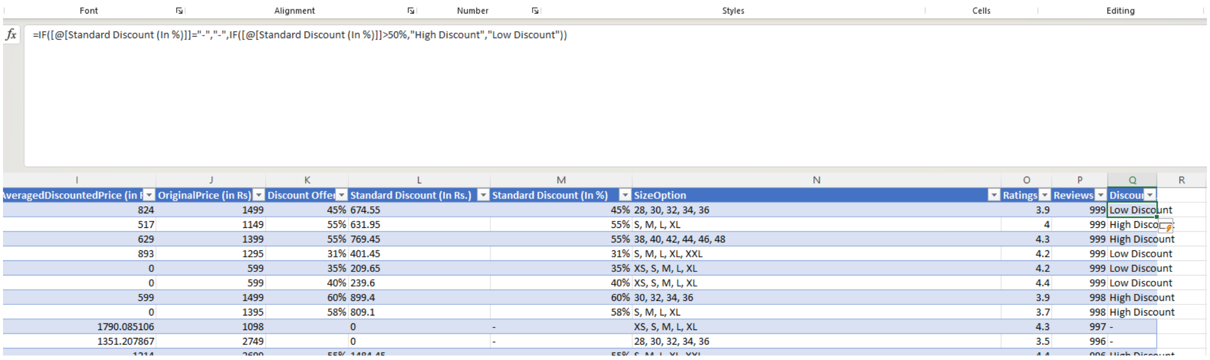
Check if Discount > 50%:

IF([@[Standard Discount (In %)]] > 50%, "High Discount", "Low Discount")

If discount is more than 50%, outputs "High Discount".

If not, outputs "Low Discount".

Condition	Output
Discount = "-"	"-"
Discount > 50%	"High Discount"
Discount ≤ 50% and not "-"	"Low Discount"



Font Alignment Number Styles Cells Editing

=IF([@[Standard Discount (In %)]]="-","-",IF([@[Standard Discount (In %)]]>50%,"High Discount","Low Discount"))

AveragedDiscountedPrice (in R	OriginalPrice (in Rs)	Discount Offer	Standard Discount (In Rs.)	Standard Discount (In %)	SizeOption	Ratings	Reviews	Discour
824	1499	45%	674.55	45%	28, 30, 32, 34, 36	3.9	999	Low Discount
517	1149	55%	631.95	55%	S, M, L, XL	4	999	High Disco
629	1399	55%	769.45	55%	38, 40, 42, 44, 46, 48	4.3	999	High Discount
893	1295	31%	401.45	31%	S, M, L, XL, XXL	4.2	999	Low Discount
0	599	35%	209.65	35%	XS, S, M, L, XL	4.2	999	Low Discount
0	599	40%	239.6	40%	XS, S, M, L, XL	4.4	999	Low Discount
599	1499	60%	899.4	60%	30, 32, 34, 36	3.9	998	High Discount
0	1395	58%	809.1	58%	S, M, L, XL	3.7	998	High Discount
1790.085106	1098		0	-	XS, S, M, L, XL	4.3	997	-
1351.207867	2749		0	-	28, 30, 32, 34, 36	3.5	996	-

Formula:
=IF([@[Standard Discount (In %)]] = "-", "-", IF([@[Standard Discount (In %)]] > 50%, "High Discount", "Low Discount"))

C. Data Retrieval and Lookup

1.Use VLOOKUP/XLOOKUP to find the product brand, price, and rating of the product with Product_id "11226634".

Solution:

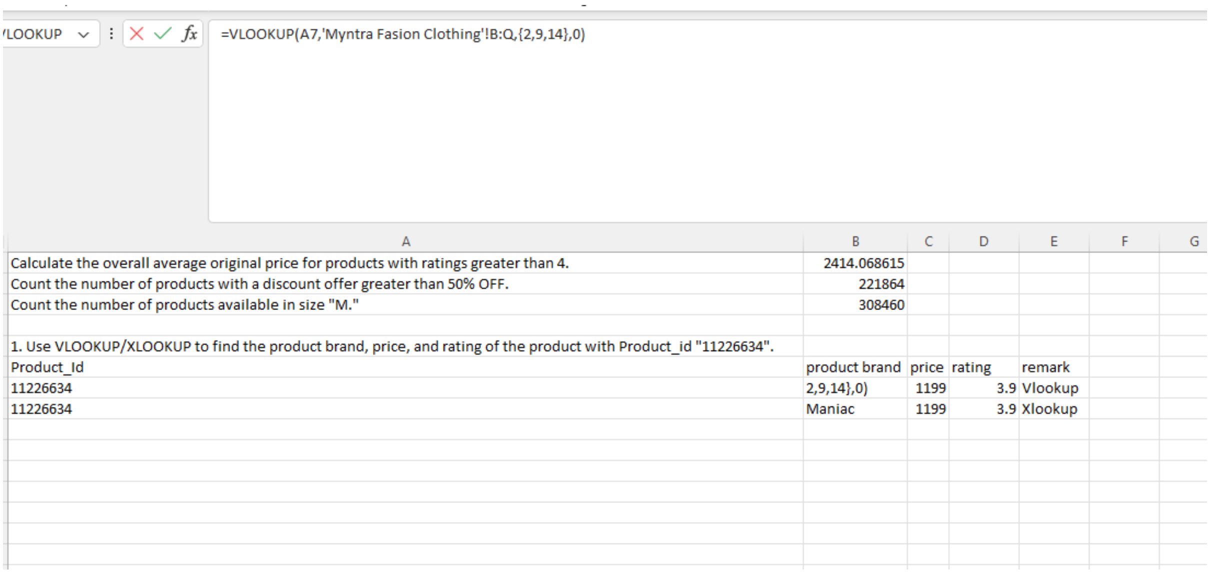
Searches column B (the first column in B:Q) for the value in A7.

Returns the: 2nd column of the range (which is Column C) — e.g., Brand,

9th column (Column J) — e.g., Price,

14th column (Column O) — e.g., Rating,

These three values spill horizontally into adjacent cells.



A	B	C	D	E	F	G
Calculate the overall average original price for products with ratings greater than 4.	2414.068615					
Count the number of products with a discount offer greater than 50% OFF.	221864					
Count the number of products available in size "M."	308460					
1. Use VLOOKUP/XLOOKUP to find the product brand, price, and rating of the product with Product_id "11226634".						
Product_Id	product brand	price	rating	remark		
11226634	2,9,14},0)	1199	3.9	Vlookup		
11226634	Maniac	1199	3.9	Xlookup		

Formula
=VLOOKUP(A7,'Myntra Fasion Clothing'!B:Q,{2,9,14},0)

A8 is the lookup value — the specific Product ID you want to find details for.

Table1[Product_id] is the lookup array — the column where Excel searches for that Product ID.

CHOOSE({1,2,3}, ...) creates a virtual array combining 3 columns:

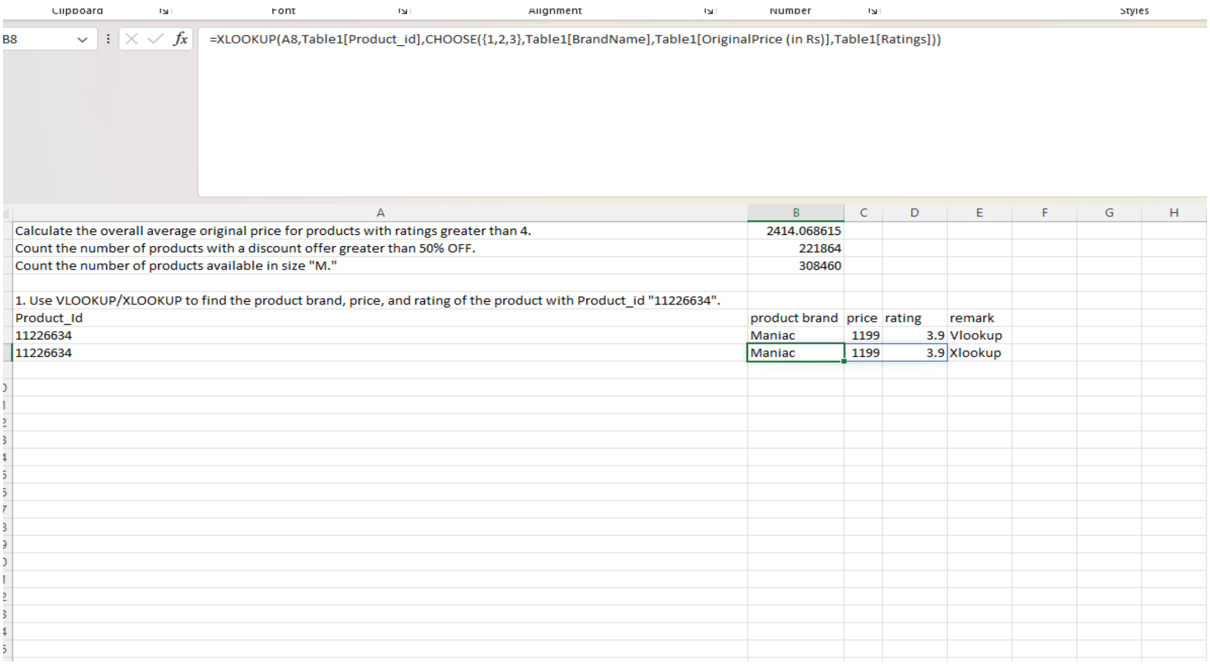
Table1[BrandName] (brand of product),

Table1[OriginalPrice (in Rs)] (product price),

Table1[Ratings] (product rating).

XLOOKUP finds the row where the product ID matches and returns values from those three columns all at once.

The formula outputs an array of 3 values (brand, price, rating) that spill horizontally into adjacent cells automatically.



Formula
=XLOOKUP(A8,Table1[Product_id],CHOOSE({1,2,3},Table1[BrandName],Table1[OriginalPrice (in Rs)],Table1[Ratings]))

2.Find the "DiscountPrice" for the product with the Product ID "6744434" using the INDEX and MATCH functions.

Solution:
MATCH(A12, 'Myntra Fasion Clothing'!B:B, 0)

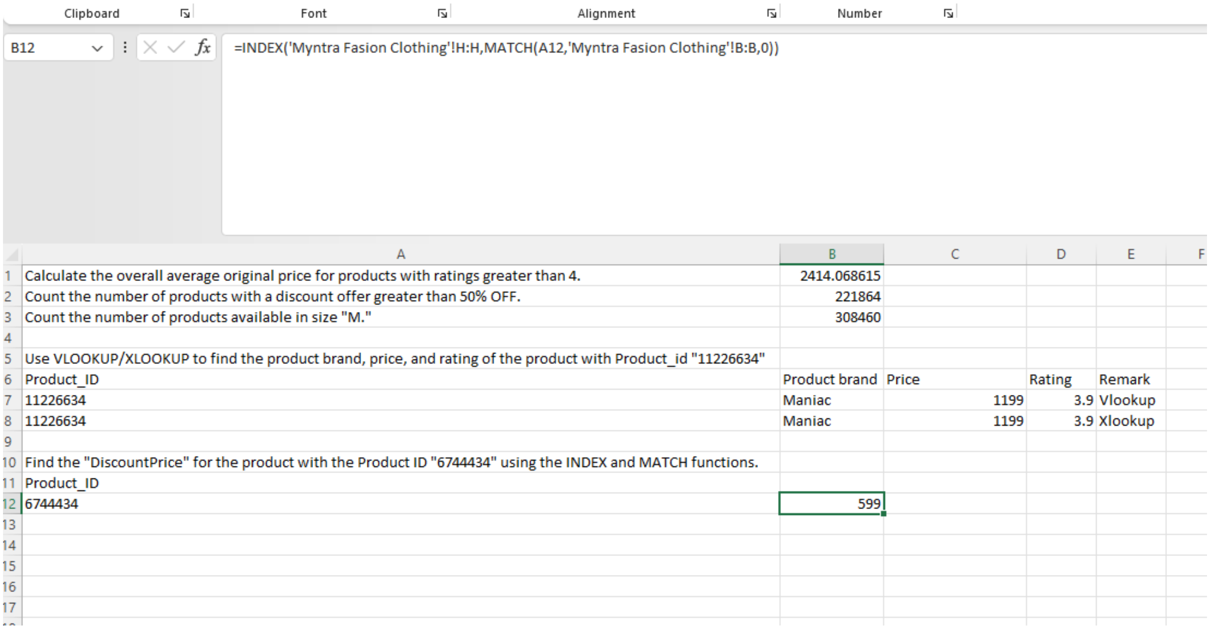
Searches column B for the exact value of A12.

Returns the row number where it’s found (relative to the start of B:B).

INDEX('Myntra Fasion Clothing'!H:H, ...)

Takes the row number from MATCH.

Looks up that row in column H and returns its value.



Clipboard Font Alignment Number

B12 =INDEX('Myntra Fasion Clothing'!H:H,MATCH(A12,'Myntra Fasion Clothing'!B:B,0))

	A	B	C	D	E
1	Calculate the overall average original price for products with ratings greater than 4.	2414.068615			
2	Count the number of products with a discount offer greater than 50% OFF.	221864

13					
14					
15					
16					
17					

Formula

=INDEX('Myntra Fasion Clothing'!H:H,MATCH(A12,'Myntra Fasion Clothing'!B:B,0))

3.Utilize nested xlookup to find any column's detail of a product with it's product id.

Solution

Outer XLOOKUP

Lookup_value: A16 (the product ID from your current sheet)

Lookup_array: Table1[Product_id] (where Excel searches for that ID)

Return_array: The inner XLOOKUP, which will find the correct column dynamically based on a header name

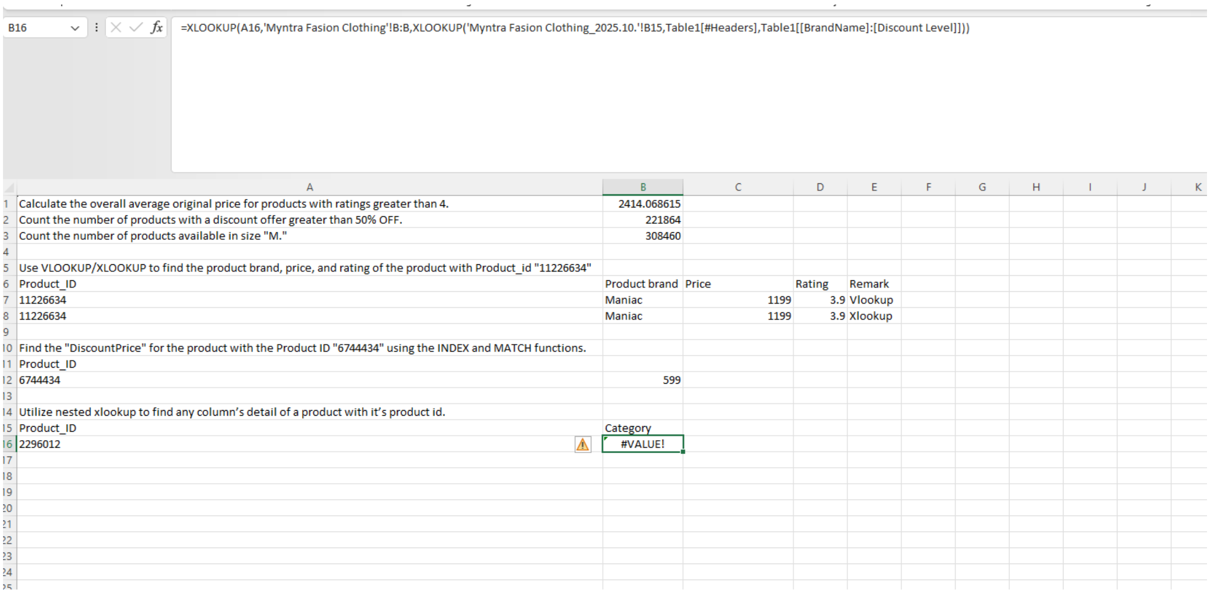
Inner XLOOKUP

Lookup_value: 'Myntra Fasion Clothing_2025.10.'!B15 (the column header name you typed, e.g., "BrandName" or "Discount Level")

Lookup_array: Table1[#Headers] (the header row inside Table1)

Return_array: Table1 (the full table body).

When the header matches, XLOOKUP returns that entire column as an array.



B16 =XLOOKUP(A16,'Myntra Fasion Clothing'!B:B,XLOOKUP('Myntra Fasion Clothing_2025.10.'!B15,Table1[#Headers],Table1[[BrandName]:[Discount Level]]))

	A	B	C	D	E
